

State of Environment & Environmental Indicators

Ministry of Environment

Monitoring & Assessment Directorate

SOE & Environmental Indicators

Eng. Faraj Altalib

Country Visit Jordan

14-15/05/2018

organization and production

- The State of Environment and Environmental Indicators section was established in 2006 in the Monitoring and Assessment Directorate within the restructuring of the ministry.

The main task of this section:

- *Preparing periodic reports on the state of the environment in Jordan*
- *Preparing a national list of environmental indicators*

- *Two reports* on the state of the environment in Jordan have been produced in 2009 and 2016.
- The *DPSIR* model was used to build these reports
- Due to the absence of a national list of environmental indicators, these reports were developed in **a descriptive manner.**

Preparation

- *Inviting concerned parties* that have data and information to nominate their representatives to participate in the preparation of the report
- The *formation of the groups by sector* and selection of:
 - Main authors.
 - Co-authors.
 - Data providers.
- Nominate a *Chairperson and Reporters* for each team.

production

- Hold a *series of meetings* to reach the first draft of each sector.
- Preparation of the *synthesis draft* (head of the state of environment section)
- *Technical and linguistic audit.*
- *Distribution of the final draft to all concerned parties* officially for the purposes of review and taking notes.
- Organizing a *workshop* to review the SOER draft and taking comments.
- *Reflection of the received notes* on the report.
- *Design , Printing & publishing.*

difficulties related to access and sharing data and information

- *Scattering of data and information* on different entities working in the environmental field, which requires great efforts to reach them
- *Absence of a unified platform* for environmental information and data/ DOS.
- *Different verification & validation methodologies* applied by different producers of environmental information and data.

THANK YOU
