ENI SEIS II

3rd Steering Committee
Vienna, 6th November 2018

Recent steps

Asked for a technical assistance aimed to:

- identification of present status and related gaps and needs;
- establish national fact sheets;
- train staff to calculate required indicators and report them.

Environment Information System (EIS)

Environment Information System was established in Montenegro on the end of 2017.

EIS has dual focus:

- Reporting of the information required under EIONET priority data flows;
- Processing of National list of indicators for Environment, which was adopted by Government of Montenegro in March 2013.

Establishment of IRIS represents basis for successful measurement of progress in the 2030 National Strategy of Sustainable Development implementation.

Sustainable development indicators system

Progress measurement of achieving SD goals will be reported next year, based on recommendation from Strategy-reporting after 2 years

THANK YOU
